

CASE STUDIES

Schneider Packaging

Palletizing

The Application

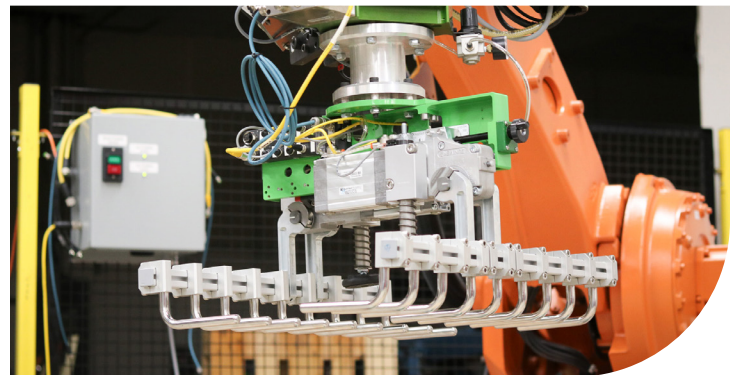

Schneider Packaging, based in Upstate New York, operates a palletizing application centered around handling bags of decorative stone used in landscaping. These products must be consistently picked, positioned, and stacked for shipment and retail distribution. The bags are somewhat flexible, filled with heavy, irregular contents. This application requires stable and controlled handling. Efficient palletizing is critical for keeping up with production demands and meeting delivery timelines.

The Challenge

Schneider Packaging required a reliable and robust palletizing solution that could handle the weight and variability of their products without compromising performance. At the same time, they were facing significant lead time challenges with other end-of-arm tooling providers. Delays in acquiring the appropriate gripper risked impacting production efficiency and fulfillment schedules, making both performance and delivery speed essential factors in their decision.

The Solution

EFFECTO provided a solution that addressed both the technical and logistical challenges. Leveraging an existing relationship with Sales Manager Ed Miron, along with prior positive experience using EFFECTO equipment, Schneider Packaging chose to move forward with the EFFECTO bag gripper. The gripper delivered the strength, stability, and reliability required for their palletizing operation, while EFFECTO's ability to provide a short lead time ensured minimal disruption to their production schedule. This combination of proven performance and responsive support reinforced Schneider Packaging's confidence in EFFECTO as a trusted partner for their automation needs, factored into their decision. ●
